

## QIMRB GUARDIANS User Story 18: Use Case Diagram

**User Story 18:** As a Data Controller (or Data Owner), I want to be assured that users accessing QIMRB's GUARDIANS infrastructure have login credentials verified by their affiliated institution, so that we adhere to data sharing guidelines and laws, and we only allow access to authenticated and authorised people.

\* This user story solely describes the verified authentication to QIMRB's GUARDIANS infrastructure. It stops short of describing authorised access to data, because that is an entirely separate process requiring a formal application and ethics and other approvals. Authentication and authorisation are two separate processes.
